Volume 1, Issue 39

September 24 – September 30, 2025

Daily Ranges

- Max/ Min Temps
- Max/ Min Normal

Daily Extremes

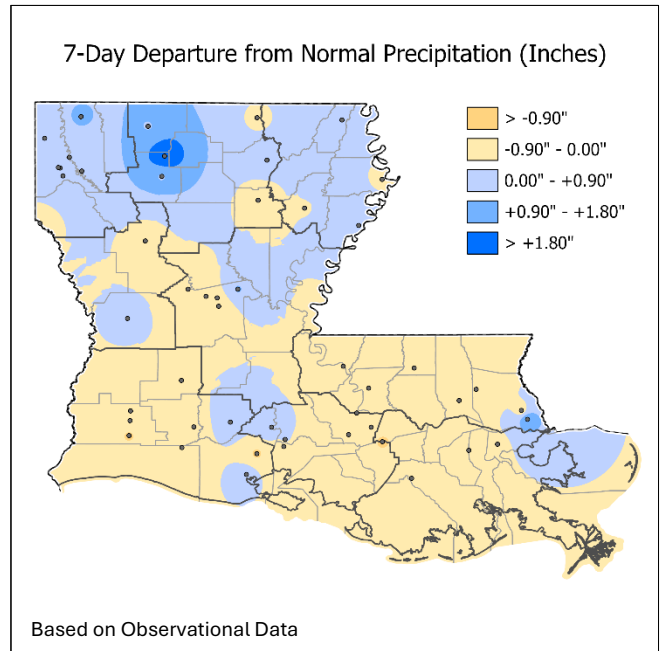

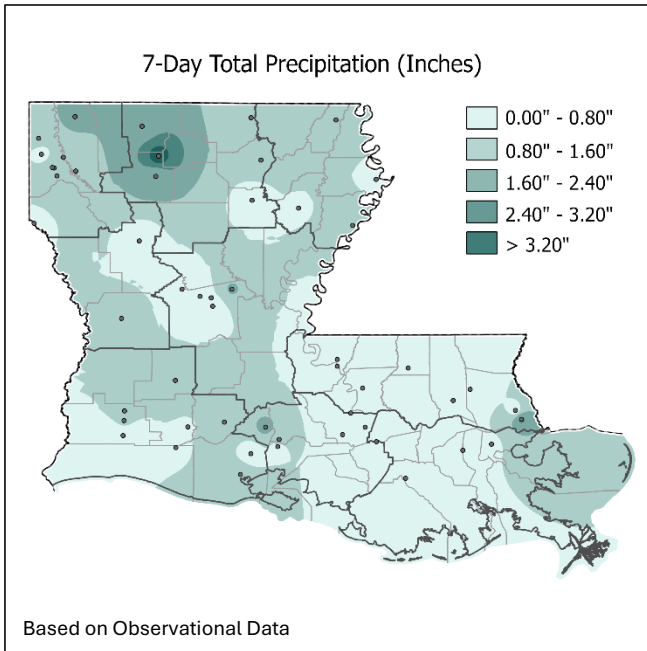

- Record High Max
- Record High Min
- Record Low Max
- Record Low Min

Rainfall

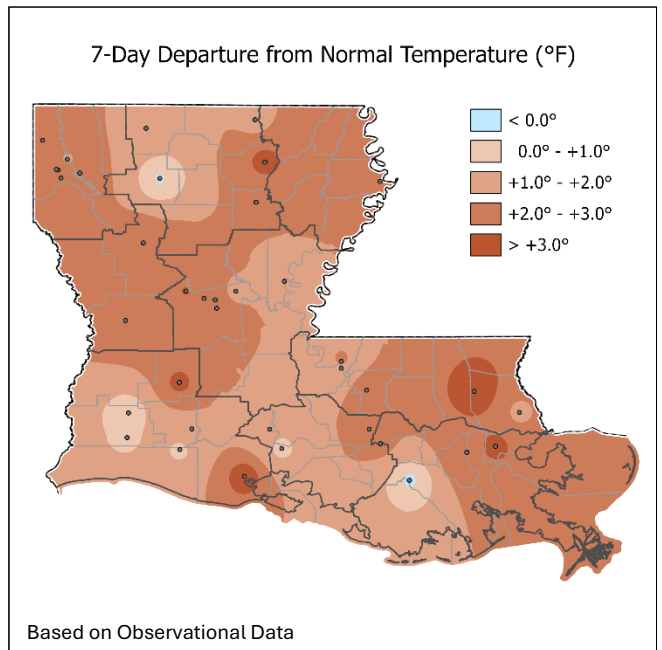

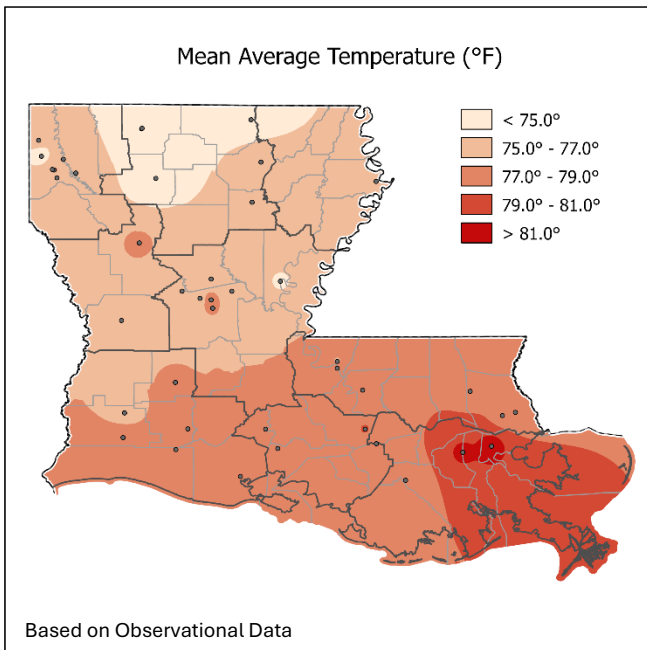

* PROVISIONAL DATA

7-Day Accumulated Rainfall & Average Temperatures: Sept 24 - Sept 30, 2025

- the majority of the rain that fell on the Bayou State during the 7-day period took place on 9/24 prior to a frontal passage; post-frontal conditions were dry statewide
- northern Louisiana received the highest amounts with lesser amounts further south; keep in mind that though much of central and northern Louisiana received above normal precipitation most of it fell in one day

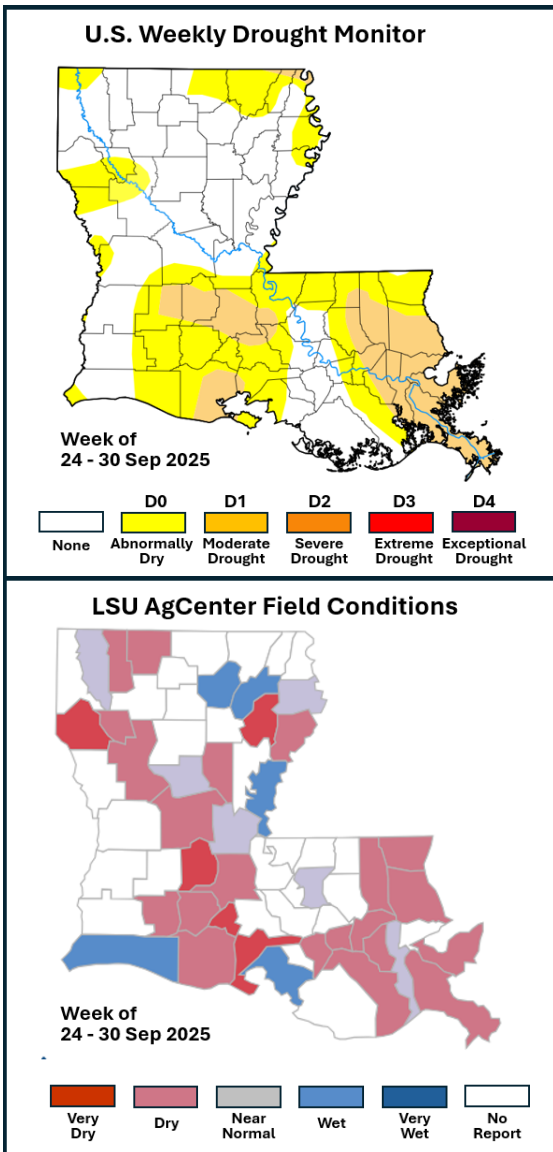

- following a frontal passage on 9/24, high and low temperatures were slightly cooler than the prior 7-day periods; however, average temperatures were still above 7-day normals for almost all of the state
- the biggest change following the frontal passage was a reduction in humidity which allowed for a wide range of temperatures, including (per LOSC analysis) lows of 55°F at three stations and a high of 97°F at Shreveport Southern Hills

Divisional and Statewide Summary: 24 Sep – 30 Sep 2025

Divisions	Avg T-Max	Avg T-Min	T-Avg (°F)	T-Avg DFN	Highest T-Max	Lowest T-Min	HDD	HDD %-N	CDD	CDD %-N	Total P (in.)	P-DFN (in.)	1-Day P-Max	Rain Days

* T - Temperature (°F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

USDM: Issued October 02, 2025 - includes data thru September 30

The Louisiana Drought Team (LDT), in coordination with the national USDM authors, significantly increased the aerial coverage of D1 (‘Moderate Drought’) across south-central and southeastern Louisiana. D0 (‘Abnormally Dry’) coverage was reduced along the LA/AR border and increased slightly across the Florida parishes.

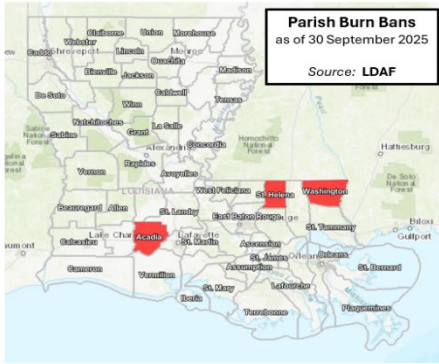

Statewide coverage of D1 increased from 4.82% to 16.82%, the highest since 11/5/24.

A majority of the rain that fell during the 7-day period occurred on Sep 24th. Portions of central and northern Louisiana received several inches of rain, prompting the NWS to issue several Flash Flood Warnings.

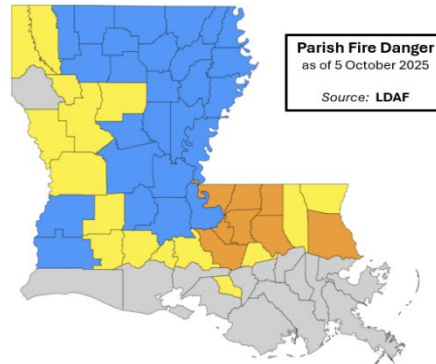

LSU AgCenter agents noted unusual dryness across much of the Bayou State by the close of the 7-day period as indicated by their weekly Field Conditions assessments.

Three parishes still have burn bans in effect: Acadia, St. Helena, and Washington.

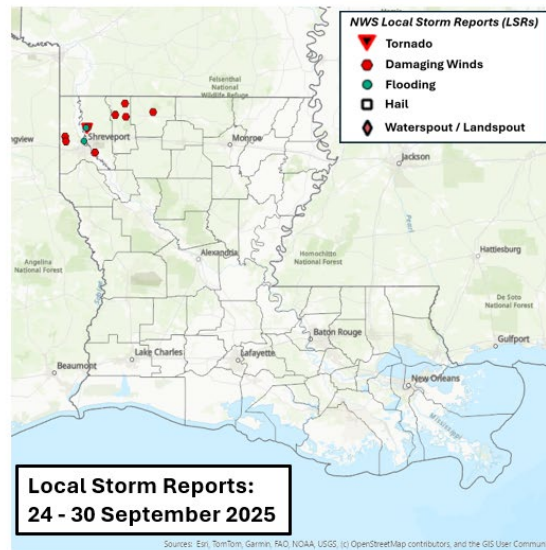

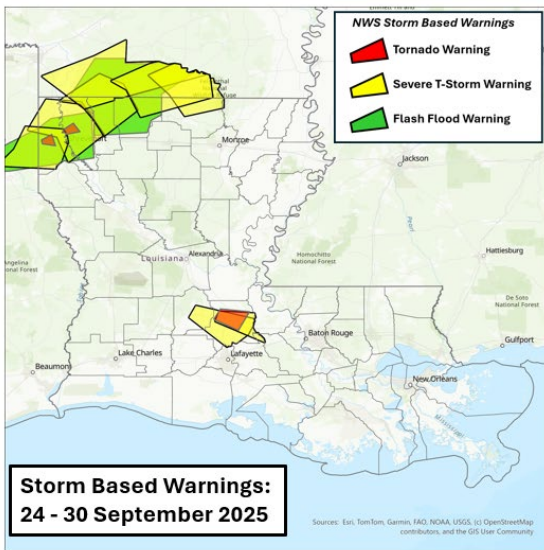

Fire danger levels remain “very high” across a majority of the Florida Parishes as of early October. Most of the remaining parishes along and north of the I-10/12 corridor are posted with “medium” to “high” fire danger levels in response to the recent run of dry weather.

Parish	Ban Issued	Ban Lifted
Acadia	9 / 17	-----
Allen	9 / 16	9 / 22
Evangeline	9 / 18	9 / 25
St. Helena	9 / 13	-----
Tangipahoa	9 / 12	9 / 25
Washington	9 / 129	-----

Parish Burn Bans and Fire Danger data and mapping are provided by the Louisiana Dept. of Agriculture & Forestry (LDAF).

Tornado Reports: 24 - 30 Sep 2025

EF Rating	Date	Time (CDT)	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
EF-1	09 / 24 / 2025	12:35 PM - 12:37 PM	Bossier	88	0.3	60	0 / 0	✓

Prop Dmg: Property Damage

All Warnings and Local Storm Reports (LSRs) for the 7-day period were recorded on Sep24th, including the EF-1 tornado that touched-down in Bossier Parish. The storm activity on Sep 24 was associated with a cold front moving through the state from northwest-to-southeast. In addition to the EF-1 tornado, storms associated with the advancing cold front generated pockets of wind damage and localized flash flooding across sections of north-western Louisiana.

Later that day, storms over Acadiana prompted the Lake Charles NWS to issue 3 warnings, including a Tornado Warning at approximately 5:35 PM (CDT) for St. Landry Parish, based on radar-detected rotation. However, the warning was not confirmed by ground reports.

Station Summaries by Division: Sept 24 – Sept 30, 2025

* T - Temperature (°F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
